

## **INTERVIEW SUMMARY**

Applicant thanks the Examiner for taking the time to discuss the relationship between claim 53 and U.S. Patent No. 6,302,698 to Ziv-El. We discussed that Ziv-El discloses a computer system that includes a teacher's display and a student's display. We also discussed the need for the Examiner to insure that his analysis is focused on either the student's display or the teacher's display but not to read some limitations from the student's display and read other limitations from the teacher's display. We discussed that claim 53 requires certain items to be presented on a single display. The Examiner stated that he would focus his future analysis on the student's display.

We also discussed the fact that the student's display in Ziv-El does not disclose the simultaneous presentation of a question, an answer, and the claimed first and second characters. Applicant agreed to amend the independent claims to clarify the simultaneous display requirement. The Examiner agreed that Ziv-El does not disclose the simultaneous presentation of the claimed items.

We also discussed the fact that Ziv-El does not disclose a computer that after receiving an incorrect character and a correct character, presents on a display only the correct character (as required in the independent claims). To the contrary, Ziv-El would present both the incorrect character and the correct character. Similarly, we discussed the fact that Ziv-El does not disclose a computer that after receiving two incorrect characters, presents on a display only the last entered incorrect character (as required in the independent claims). To the contrary, Ziv-El presents both of the incorrectly entered characters.

Finally, we discussed the fact that the student's display in Ziv-El does not use colored fonts to distinguish between correct and incorrect characters.

Again, Applicant thanks the Examiner for taking the time to discuss the above subject matter.
